

Browser Add-ons and Viewing Hints

The NucNet web pages use the standard browser add-ons "Flash" by Adobe, "Java Run-time Environment" by Oracle, and "Silverlight" by Microsoft.

For best viewing results these add-ons should be enabled.

NucNet's web pages are optimised for a screen width of at least 800 pixels.

A specially designed NucNet web-site version for mobile devices with larger characters, touch-screen navigation buttons, and reduced screen width is in preparation.

Character encoding is based on the UTF-8 (UCS Transformation Format — 8-bit) table in order to allow the use of all kinds of characters and diacritical signs.

If you see unusual characters on your screen or certain characters are systematically missing, please check the "encoding" settings in your browser's viewing options.
